Join our NEC updates class to learn about important changes to the electrical code and earn 8 hours of credit to maintain your Journeyman or Masters card. This class aims to help you

- ➔ learn about changes to the 2023 NEC® (and some 2020 NEC changes)*
- ➔ understand the reasons behind the changes
- ➔ understand how these changes will impact your work

This seminar will cover the major changes in the newly published 2023 National Electrical Code®. Photos and illustrations will be used to show how the NEC® is changing and how those changes will affect electrical installations.

Changes include new Articles, new AFCI and GFCI requirements, residential receptacle changes, changes to lighting load calculations, new surge protection requirements, Class 4 power systems, and many more changes that affect installations and inspections. Changes to requirements for load calculations, disconnect requirements, wiring methods, and more will be discussed. Requirements affecting residential, commercial, and industrial installations will be explained using color graphics and photographs.

****Since Southern Nevada jurisdictions did not adopt the 2020 NEC, important changes from the 2020 NEC will also be covered.***
